THINK YOU KNOW BRUSH?

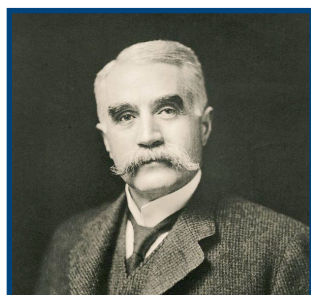

The energy management landscape is evolving. And it requires agility, innovation and the ability to challenge the status quo to keep pace.

Of course, after almost 150 years as a **leader in energy management solutions**, we know a thing or two about adapting to changing needs.

Whether it is through the innovative engineered solutions we manufacture, or the engineering solutions we provide that help build the critical infrastructure upon which we all rely, we utilise our **well-earned expertise** and **deep understanding of power systems and UK infrastructure** to deliver solutions that drive real change.

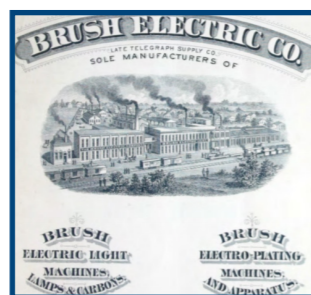

A long legacy

With a long legacy as a manufacturer of industry-leading engineered products, for generations we've helped to build the electrical energy infrastructure with solutions that address grid resilience, future-proof critical infrastructure and support the drive to net zero.

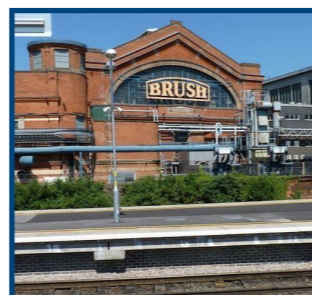

1876
First Electric Dynamo

Charles Francis Brush invents his first electric dynamo. The Franklin Institute of Philadelphia judge it 'superior' due to its simpler design and maintainability.

1879
Established in London

The Anglo-American BRUSH Electric Light Corporation was first established in London.

1889
Falcon Works, Loughborough

With growing demand for new electrical apparatus, larger premises are sought and the company moves into the newly acquired Falcon Works in Loughborough, Leicestershire.

1957
Hawker Siddeley

The BRUSH group of companies is purchased by Hawker Siddeley.

1996
Leading Manufacturer

The company continues to build on its reputation as a leading OEM manufacturer.

Present Day
The BRUSH Group

Specialist electrical engineering company, Aprenda, along with KUS Power Engineering, Eta Projects Ltd, Poise Group, Co.Bo.T, RYBKA and McGowan join the Group to enhance its engineering solutions offering.

THE **ENGINEERED PRODUCTS** YOU KNOW, THE EXPERT **AFTER-SALES** SERVICE YOU RELY ON AND THE **ENGINEERING SOLUTIONS** YOU NEED.

MORE THAN THE SUM OF OUR PARTS

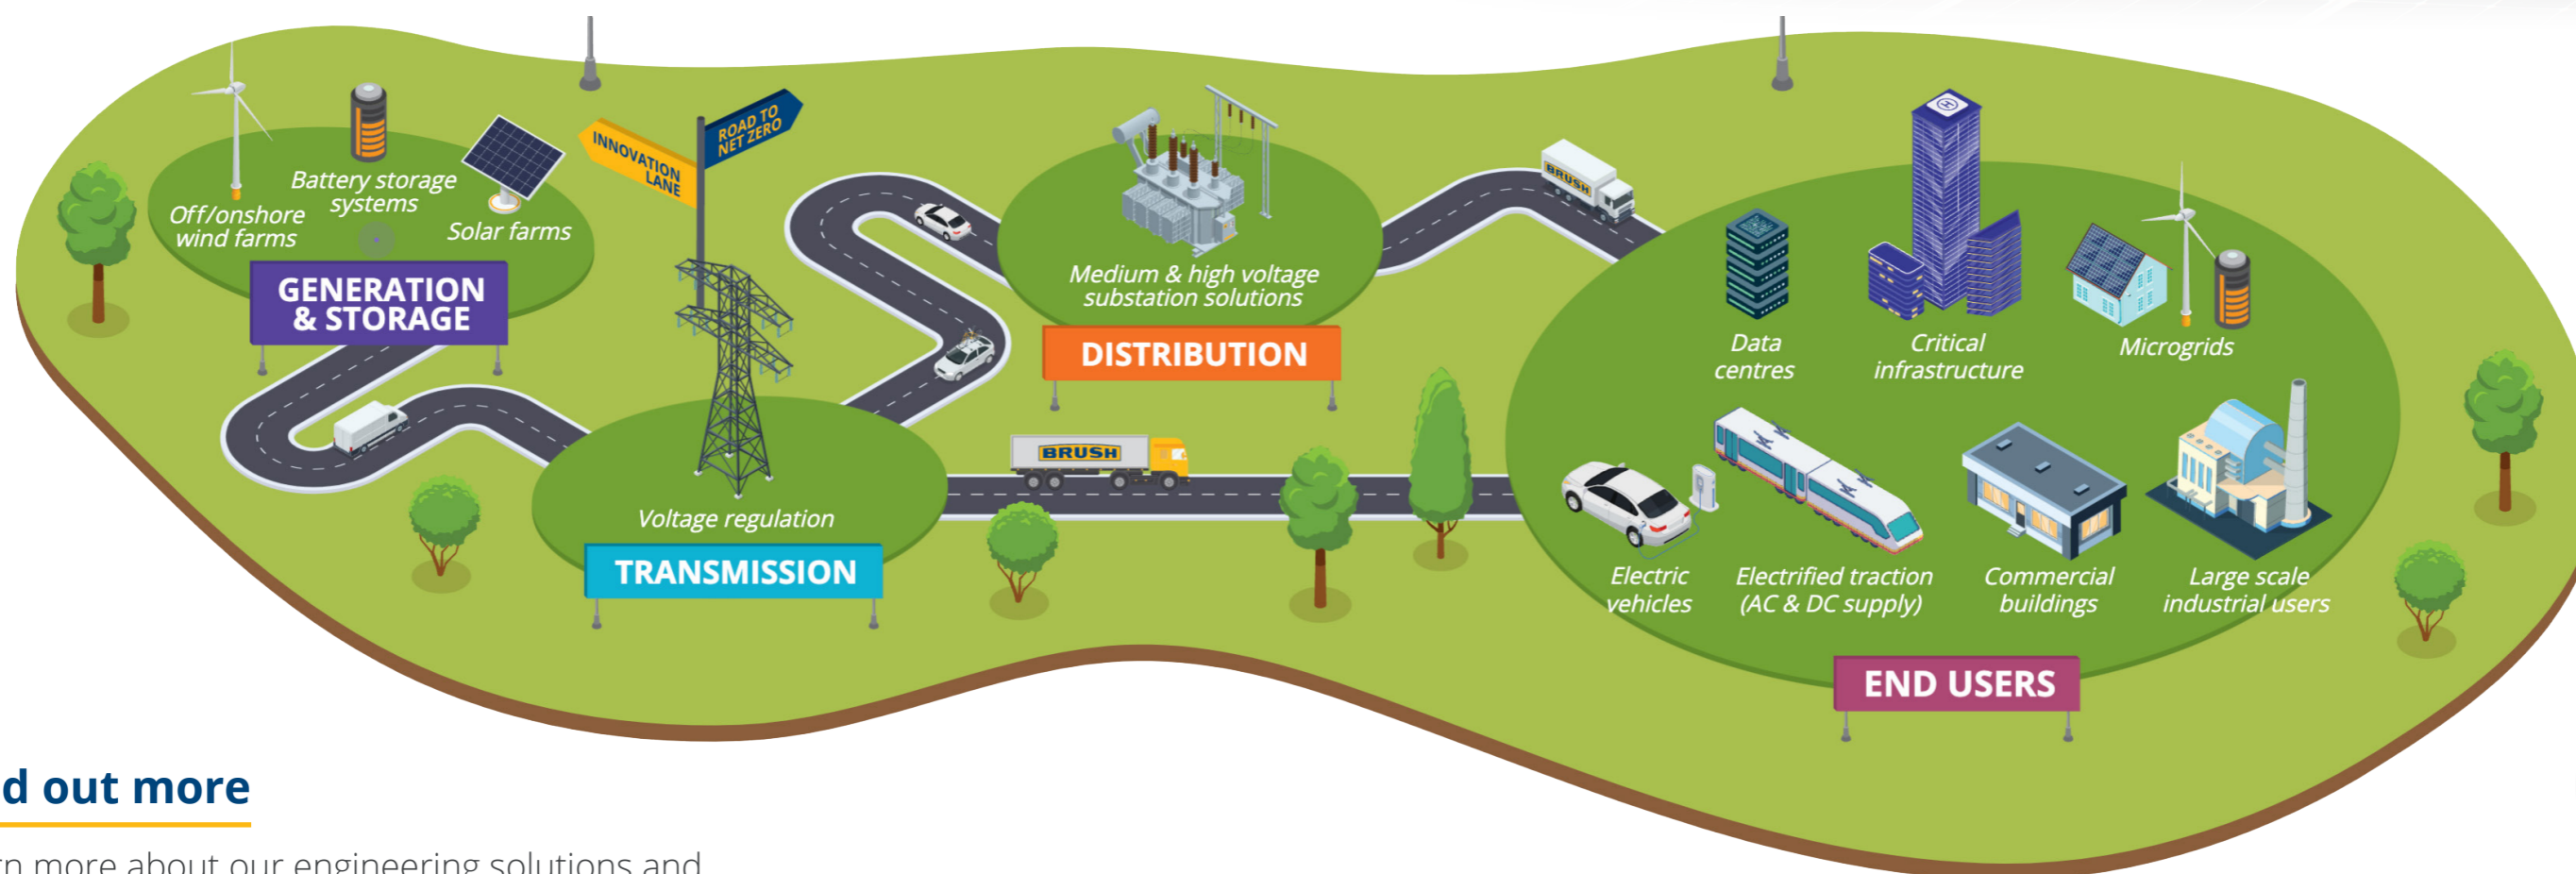

Along with the engineered products we've built our name on, we use our expertise, experience and extensive capabilities to deliver **comprehensive engineering solutions** to a wide range of projects.

From concept, through to design, build, connection and everything in between, our end-to-end engineering offering provides solutions across the **energy management and infrastructure landscape**.

A sustainable solution

From how our products perform to our manufacturing processes, supply chain and the business culture we create; across our organisation we are committed to operating in an environmentally sustainable way.

Find out more about our sustainability goals and how we aim to achieve them at brush.eu/sustainability.

THE FUTURE REIMAGINED

We've reimagined what it is to be an OEM manufacturer. And, using our well-earned, deep understanding of power systems, we've developed a portfolio of products, services and engineering solutions that meet the needs of DNOs, IDNOs, developers, operators, EPCs and more. Underpinned by our commitment to offering OEM agnostic solutions, our designs are based on what is right for the project, even if that means including products from other suppliers.

Delivered through our Group businesses, each with complementary skills and exceptional technical know-how, **our comprehensive suite of engineering solutions includes:**

| | | |
|---------------------------|------------------------------------|------------------------------|
| Design | M&E Design | Build |
| Project Management | Infrastructure Services | Connections |
| Electrical Installation | Testing & Commissioning | Green Energy Solutions |
| Retrofits | Substation Build and Refurbishment | Maintenance |
| Authorising & Consultancy | HV Solutions | Protection & Control Systems |

Sectors we support

An agile, solution-first, approach

Our approach is never one-size fits all. We design and deliver solutions that are tailor-made to each project's specific requirements, whether that includes managing everything from concept to connection, or supporting just one aspect - we work with agility and adaptiveness to support our clients. And, because each business within our engineering solutions offering operates agnostically, they are free to specify whichever technology, product or equipment is best for the project, irrespective of manufacturer.
